WE OFFER:

An extensive showroom with examples of the entire range available to you - designs, colours and function can be considered in a relaxing, professional environment.

An in-house estimating and design team with knowledgeable product specialists to help you decide which product suits you best.

An experienced surveying team who visit site and pay close attention to detail, establishing correct sizes and confirming designs are building regulations compliant.

A range of installation options depending on your requirements. We also have a product training facility for some products should you prefer a supply only option.

A supply only trade counter based at our Paignton factory where our production team manufacture our vertical sliding sash windows.

Showroom

Our new extensive showroom based in Newton Abbott is your first stop to discover the extensive range of products Devonshire Windows can offer you.

Whether you're a first-time renovator, a self-build adventurer or a seasoned property developer we can offer you solutions and suggest options to suit both your ideas and your budget.

Displayed over 2 floors our product portfolio illustrates the best of each material with colours, styles and designs.

Modern and traditional combine in a friendly, welcoming environment with Product Specialists on hand to help.

Contact us to arrange a consultation with one of our designers today!

Glass Concepts

Sliding Doors

The ultimate in glass, sliding doors with the wow factor!

Juliet Balcony

Frameless for style and safety

Wall of Glass

For true contemporary living

Rooflights

Bathe your living space in warm, natural light

Composite

Windows

The natural beauty of timber with a low maintenance external aluminium cladding.

Sliding Doors

Low on maintenance and high on performance. Triple glazed as standard.

Doors

Plenty to choose from in a wide range of materials.

Bi-Folding Doors

Carefully designed composite sections providing slim framing without compromising performance

Aluminium

Windows
Thermally enhanced
with slim sightlines

Entrance Doors
Extensive style catalogue Secure
and easy to use. Finger print
recognition option available.

Bi-Folding Doors
Outstanding weather performance.

PVC-U

Windows

High performance,
low maintenance

Sliding Doors

Open up your home and bring the garden indoors

Doors

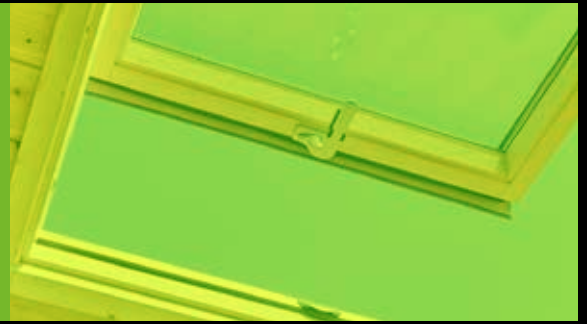

Modern, colourful
and secure

Vertical Sliding Sash Windows

Modern materials with traditional style

Timber

Windows

Sustainably sourced and structurally laminated Timber combined with high performance, micro porous surface finishes. Provide long term stability with minimum maintenance.

Doors

Extensive range of door options and approved security locking systems

Sash Windows

Bespoke and elegant. Acceptable in Listed and Conservation areas.

Bi-Folding Doors

Open up your home with our slimline timber doors system.

Passivhaus

What is Passivhaus?

Here's the definition taken from the Passivhaus Trust website (The UK Passive House Organisation)

Passivhaus buildings provide a high level of occupant comfort while using very little energy for heating and cooling. They are built with meticulous attention to detail and rigorous design and construction according to principles developed by the Passivhaus Institute in Germany, and can be certified through an exacting quality assurance process.

Glazing in Passivhaus projects has to meet or surpass the demands for minimal air leakage and low u values for maximum energy savings. Glazing design and specification is paramount if you want to succeed in your Passivhaus project.

The biggest challenge for any project is how to deal with overheating. We have a range of products which can be used in your Passivhaus project including complementary solar shading systems. Home automation systems can be linked to the glazing and shading products we supply.

Passivhaus is a complex process and the integration of all the construction components and how they work together needs to be carefully considered at the early stages of the design concept. A visit to our showroom and a discussion with our technical designers will help you choose a glazing style to meet the criteria and suit your needs.

Sustainability and the Environment

Devonshire Windows have been providing insulation glazing products for new buildings and refurbishments for 30 years. Reducing heat loss in buildings reduces the energy used to heat the building and saves CO2 emissions into the atmosphere. Wherever possible we send waste materials recovered from our refurbishment activity and our production facility to be recycled. We source our components from reliable reputable suppliers who hold similar views on running a business and the impact on the environment. Over the last few years we have been working on reducing the paper used in our business and this has recently been boosted by providing our sales and surveying staff with electronic tablets.

Getting to know our clients and their needs helps us to recommend products that will be most beneficial and aesthetically pleasing. We supply windows and doors in all shapes and sizes made from timber, PVC-U and aluminium. These products all have impacts on the environment and the material suppliers have organisations who help to steer the suppliers towards lower environmental impact.

Wood

Windows made from wood are becoming more popular. Advances in surface treatment finishes and construction methods are making windows and doors fabricated from timber being viewed as the most sustainable as well as the most attractive solution. The Forest Stewardship Council (FSC) logo on a wood or wood-based product is your assurance that it is made with, or contains, wood that comes from FSC certified forests or from post-consumer waste.

Aluminium

Aluminium has several significant sustainability benefits. It is very durable so can last for long periods of time without replacement and with little or no maintenance. It is 100% recyclable and is one of the few metals that can be repeatedly recycled with no loss of quality. The act of recycling aluminium also requires only 5% of the energy needed to produce new aluminium.

PVC

PVC-U windows and doors provide cost effective energy efficient glazing solutions for house builders and renovators and require minimal maintenance during their lifespan. PVC-U, like all other thermoplastic materials, can be recycled relatively straightforwardly. The primary aim of recycling is to elicit a net environmental benefit through reducing the use of primary resources and/or diverting resources from landfill.

Glass

Sealed unit production and glass coating technology has advanced rapidly over the last 10 years and the u values which can now be achieved whilst still allowing high light transmittance are helping designers to take advantage of solar gain in their building performance calculations. Positive energy flow into the building quickly offsets the energy usage during production and processing. Glass coatings reduce CO2 emissions in use and enhance the comfort of the building for the occupants.
